The UX layer for prediction markets.

One account. One balance. Every market.

THE THESIS

The next 100 million crypto users won't come in by ~~learning crypto.~~

Nobody learned **TCP/IP** to use the internet.

Nobody learned **SWIFT** to use Venmo.

Prediction markets are bigger than crypto.

MONTHLY VOLUME, KALSHI + POLYMARKET

SHARE OF VOLUME THAT IS CRYPTO QUESTIONS

Kalshi is 80% sports. Polymarket is 39% sports and 32% politics.

Pew Research, May 2026 · Bloomberg Law, Oct 2025 · CoinDesk, Jun 2026

5×

volume growth in seven months

$2B

ICE (NYSE owner) into Polymarket

$22B

Kalshi valuation, reportedly seeking $40B

$15B

Polymarket valuation

THE PROBLEM

There's a line outside the door. Crypto sends every one of them home.

ON THE EVENING NEWS

"Polymarket says 70%."

They have an opinion. They want to put $20 on it.

01	Install a wallet	new app
02	Write down 24 words. Never lose them.	or lose it all
03	Buy USDC on an exchange	KYC, wait
04	Bridge it to Polygon	which bridge?
05	Lose a cut to gas on the way	$20 becomes less
06	New market on another chain? Repeat.	back to 01

Tab closed.

Every headline.
Every day.
Every new market.

AND IT GETS WORSE EVERY DAY

Hundreds of markets. Hundreds of chains. Today, that's hundreds of accounts.

SOLANA

Solana prediction markets

A fast-growing wave of native venues, plus Kalshi outcomes tokenized on Solana

Polymarket
own wallet

Kalshi
own account

Hyperliquid
own chain

Limitless
on Base

World
own chain

+100s more
across 100+ chains

+

tyr
One account.
One balance.
Every market.

Every one is a new wallet, a new balance, a new set of rules. **tyr puts all of them behind one account.**

INTRODUCING TYR

Not a market problem. A front-door problem. tyr is the front door.

You bring an opinion. tyr handles the venue, the chain, the money and the signing. Every chain behind it does one job only it can do.

You
A fingerprint and an opinion. That's it.

→

tyr account layer

TEMPO	**Your account.** Passkey login, sponsored gas, spend limits the protocol enforces, receipts.
ZCASH	**Private way in.** A shielded payment whose encrypted memo is the order.
SOLANA	**Your bankroll.** Confidential balances hide amounts. Custody and settlement.
ROBINHOOD	**The hedge.** Pair a bet with a Stock Token in the same ticket.
BASE · ARB · ETH	**Fund from anywhere.** Deposits land in one balance.

→

BEST-PRICE ROUTER

- Solana markets
- Polymarket
- Kalshi
- Hyperliquid
- Limitless
- World

HOW IT WORKS

The account prediction markets were missing.

01 · SIGN UP — Tempo

Fingerprint. Done.

Passkey account, fees sponsored. No seed phrase, no extension, no gas.

02 · SET A LIMIT — Tempo MPP

Your limit is law.

Set $50/day once. Every bet is checked on-chain. Over the limit is blocked, not warned.

03 · FUND

One private balance.

From Base, Arbitrum, Ethereum or Solana, or shielded Zcash. Lands in a Solana confidential balance nobody can read.

04 · BET — tyr router

Every market, best price.

One list of questions, every venue's price side by side. The router fills at the cheapest all-in price, or splits the order.

05 · HEDGE — Robinhood Chain

Bet and hedge in one tap.

Betting on the Fed? Hedge with an S&P Stock Token in the same ticket. One receipt.

06 · GET PAID, SAFELY — only on tyr

Private, provable, agent-safe.

Payouts with receipts. Prove one payout for taxes, reveal nothing else. Give an AI a budget, never your keys.

SAME QUESTION, 100 YES

Kalshi $0.60 + $1.68 fee = ~~$61.68~~

Polymarket $0.61 + $0 fee = `$61.00, routed here`

The next 100M users won't learn crypto. They'll just use tyr.
